

Technical specification

- Continuous measurement of friction (skid resistance) with fixed slip of measuring wheel
- Usable for measuring of friction of road pavements, road markings, paint markings, pedestrian areas
- One man operation
- No user calibration required
- Integrated GPS
- Data downloadable to PC or USB stick (some of these type of connections - USB, Bluetooth, WiFi 802.11b/g)
- Software on PC for viewing measured values and their evaluation
- Possible to change measuring wheel
- Self-wetting or water system equipment for simulation of rain on the road infrastructure
- Battery endurance at least 6 hours of measurement
- Operating between temperatures 0°C and 35°C
- Compact size, portable, possible to transport in luggage space of a car (station wagon, estate)
